- A. Allowable loads shown on this detail are not in combination.  
 B. Uplift connections with clip on one face require a web above connection.  
 C. For 33TSC and greater, U = 1480 lbs (6.58 kN).  
 D. For 33TSC, U = 1530 lbs (6.81 kN). For 43TSC and greater, U = 1960 lbs (8.72 kN).

Allowable P2 lbs (kN) <sup>A</sup>		
Chord	Clip on One Face	Clip on Both Faces
28TSC	310 (1.38)	630 (2.80)
33TSC	340 (1.51)	730 (3.25)
≥ 43TSC	340 (1.51)	880 (3.91)

**General Notes:**

- Wall top plate shall be manufactured from cold-formed steel (CFS) with minimum tensile strength of 45 KSI (310 MPa) for grade 33 or 65 ksi (448 MPa) for grade 50 and maximum width of 3-5/8" (92mm).
- Attachment of second clip on opposite face of chord is identical to what is detailed.
- Connection of top plate to wall stud must be capable of transferring truss uplift load from wall top plate to wall stud.
- The wall top plate is to be designed by the job engineer. The wall top plate must be designed to support the loads applied to it (downward, upward and lateral).
- Cold-Formed Steel Calculations are per the 2010 supplement to the AISI 2007 "North American Specifications for the Design of Cold-Formed Steel Structural Members" (S100-07/S2-10).
