A. Allowable loads shown are not in combination.  
 B. Uplift connections with clip on one face require web bearing above connection.

**General Notes:**

1. Attachment of second clip on opposite face of chord is identical to what is detailed.
2. Do not overdrive screws. Overdriven screws may strip out TrusSteel chord.
3. Do not drive screws into area of beam flange directly above beam web.
4. To select proper self-drilling tapping screw for structural steel thickness refer to screw manufacturer's recommendations. Refer to manufacturer's specification and code approval regarding proper installation of #12 or #14 self-drilling tapping screws into steel thickness shown above.
5. Cold-Formed Steel Calculations are per the 2010 supplement to the AISI 2007 "North American Specifications for the Design of Cold-Formed Steel Structural Members" (S100-07/S2-10).
